

SWIFTLY

What is Swiftly?

Swiftly is a service marketplace mobile application that connects customers with local service providers on a single platform. The application allows users to easily search, book, and pay for various services such as plumbing, electrical work, home maintenance, cleaning, and other daily needs.

Swiftly simplifies the service booking process by providing a user-friendly interface, secure payment options, booking management, and email notifications. It helps customers find reliable service providers quickly while enabling service providers to manage and grow their business through the platform.

Project Overview
